

**Indoor &
outdoor
vertical
gardens**

The next big thing in construction.

If this seems like a bold statement to you, then we would like to convince you. **Greentexx®** is a composite for vertical gardens. It is a composition of several layers of textile on which plants grow. The advantages why you would offer yourself a **Greentexx®** green wall are countless:

- « A planted Greentexx® green wall provides **acoustic and thermal insulation**. This way your house, apartment or office stays cool in the summer and keeps the heat inside during winter.
- « Indoor and outdoor **air quality improves** significantly. After all, plants absorb CO₂ and fine dust from their environment.
- « A Greentexx® vertical gardens **improves your well-being**. With plants you create a soothing, pleasant environment where people live and work better.
- « Greentexx® **reduces heat stress**. In summer, the green places are cooler and therefore more pleasant compared to conventional (gray) urban environments.

Outdoor walls for homes & businesses ▼

^ Tailormade panels planted on site

Why Greentexx®?

Safety first.

« Greentexx® comes with the **fire certificates** B-s2-d0 and C-s2-d0 making them suitable for façade elements and even along evacuation routes in buildings.

Light & fast.

« Because Greentexx® is supplied on rolls, the installation is much faster. The pockets in which you put the plants are pre-cut, so you plant Greentexx® in record time.

^ Indoor walls for offices and at home

Intuitive design.

« Because Greentexx® is a flexible textile, you can easily make **both straight and curved walls** with it. An architect can therefore design in all shapes and sizes.

Warranty.

« Greentexx® comes with a **10-year warranty**.

^ Pre-grown modules for immediate result

^ An eye-catcher with many benefits

NOA® outdoor living

Visit the experience centre in Kruisem (B), where you will find more than 500 m² of our green walls at 3 locations.
